Water Resources Systems Planning and Management, Volume 51 (Developments in Water Science)

Sharad K. Jain, V.P. Singh

This book is divided into four parts. The first part, Preliminaries, begins by introducing the basic theme of the book. It provides an overview of the current status of water resources utilization, the likely scenario of future demands, and advantages and disadvantages of systems techniques. An understanding of how the hydrological data are measured and processed is important before undertaking any analysis. The discussion is extended to emerging techniques, such as Remote Sensing, GIS, Artificial Neural Networks, and Expert Systems. The statistical tools for data analysis including commonly used probability distributions, parameter estimation, regression and correlation, frequency analysis, and time-series analysis are discussed in a separate chapter.

Part 2 Decision Making, is a bouquet of techniques organized in 4 chapters. After discussing optimization and simulation, the techniques of economic analysis are covered. Recently, environmental and social aspects, and rehabilitation and resettlement of project-affected people have come to occupy a central stage in water resources management and any good book is incomplete unless these topics are adequately covered. The concept of rational decision making along with risk, reliability, and uncertainty aspects form subject matter of a chapter. With these analytical tools, the practitioner is well equipped to take a rational decision for water resources utilization.

Part 3 deals with Water Resources Planning and Development. This part discusses the concepts of planning, the planning process, integrated planning, public involvement, and reservoir sizing.

The last part focuses on Systems Operation and Management. After a resource is developed, it is essential to manage it in the best possible way. Many dams around the world are losing some storage capacity every year due to sedimentation and therefore, the assessment and management of reservoir sedimentation is described in details. No analysis of water resources systems is complete without consideration of water quality. A river basin is the natural unit in which water occurs. The final chapter discusses various issues related to holistic management of a river basin.

From reader reviews:

Nicholas Hess:

Do you have favorite book? In case you have, what is your favorite's book? Publication is very important thing for us to understand everything in the world. Each publication has different aim as well as goal; it means that reserve has different type. Some people truly feel enjoy to spend their a chance to read a book. They are reading whatever they consider because their hobby is reading a book. How about the person who don't like looking at a book? Sometime, man feel need book whenever they found difficult problem or even exercise. Well, probably you will want this Water Resources Systems Planning and Management, Volume 51 (Developments in Water Science).

Michael Canton:

With other case, little folks like to read book Water Resources Systems Planning and Management, Volume 51 (Developments in Water Science). You can choose the best book if you like reading a book. Given that we know about how is important the book Water Resources Systems Planning and Management, Volume 51 (Developments in Water Science). You can add understanding and of course you can around the world by the book. Absolutely right, since from book you can recognize everything! From your country until foreign or abroad you will find yourself known. About simple point until wonderful thing it is possible to know that. In this era, we could open a book or perhaps searching by internet device. It is called e-book. You need to use it when you feel bored stiff to go to the library. Let's study.

Susan Tarin:

Reading a publication tends to be new life style in this particular era globalization. With reading through you can get a lot of information which will give you benefit in your life. Using book everyone in this world could share their idea. Publications can also inspire a lot of people. Lots of author can inspire their own reader with their story or maybe their experience. Not only the story that share in the books. But also they write about the ability about something that you need case in point. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that exist now. The authors on earth always try to improve their proficiency in writing, they also doing some study before they write on their book. One of them is this Water Resources Systems Planning and Management, Volume 51 (Developments in Water Science).

Bessie Starns:

Do you like reading a publication? Confuse to looking for your favorite book? Or your book has been rare? Why so many question for the book? But any kind of people feel that they enjoy with regard to reading. Some people likes looking at, not only science book but in addition novel and Water Resources Systems Planning and Management, Volume 51 (Developments in Water Science) as well as others sources were given expertise for you. After you know how the fantastic a book, you feel need to read more and more. Science reserve was created for teacher or even students especially. Those books are helping them to

increase their knowledge. In some other case, beside science reserve, any other book likes Water Resources Systems Planning and Management, Volume 51 (Developments in Water Science) to make your spare time more colorful. Many types of book like here.
