Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology

Willem van Meurs

THEORY AND PRACTICE OF MODELING AND SIMULATING HUMAN PHYSIOLOGY

Written by a coinventor of the Human Patient Simulator (HPS) and past president of the Society in Europe for Simulation Applied to Medicine (SESAM), *Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology* is a compact and consistent introduction to this expanding field. The book divides the modeling and simulation process into five manageable steps--requirements, conceptual models, mathematical models, software implementation, and simulation results and validation.

A framework and a basic set of deterministic, continuous-time models for the cardiorespiratory system are provided. This timely resource also addresses advanced topics, including sensitivity analysis and setting model requirements as part of an encompassing simulation and simulator design. Practical examples provide you with the skills to evaluate and adapt existing physiologic models or create new ones for specific applications.

Coverage includes:

- Signals and systems
- Model requirements
- Conceptual models
- Mathematical models
- Software implementation
- Simulation results and model validation
- Cardiorespiratory system model
- Circulation
- Respiration
- Physiologic control
- Sensitivity analysis of a cardiovascular model
- Design of model-driven acute care training simulators

“Uniquely qualified to author such a text, van Meurs is one of the original developers of CAE Healthcare’s Human Patient Simulator (HPS). ...His understanding of mathematics, human physiology, pharmacology, control systems, and systems engineering, combined with a conversational writing style, results in a readable text. ...The ample illustrations and tables also break up the text and make reading the book easier on the eyes. ...concise yet in conversational style, with real-life examples. This book is highly recommended for coursework in physiologic modeling and for all who are interested in simulator design and development. The book pulls all these topics together under one cover and is an important contribution to biomedical literature.” --*IEEE Pulse*, January 2014

“This book is written by a professional engineer who is unique in that he seems to have a natural understanding of 3 key areas as follows: the hardware involved with simulators, human physiology, and

mathematical modeling. Willem van Meurs is one of the inventors of the model-driven human patient simulator (HPS), and so, he is very qualified to write this book. The book is written in a clear way, using the first person throughout, in a conversational manner, with a style that involves posing questions and answering them in subsequent text. ...The book starts with a very useful introduction and background chapter, setting out the scene for the rest of the book. ...I have used his book in enhancing my own talks and understanding human patient simulation and can strongly recommend it.” --*Simulation in Healthcare*

From reader reviews:

Shannon Silva:

Have you spare time for a day? What do you do when you have far more or little spare time? That's why, you can choose the suitable activity for spend your time. Any person spent their own spare time to take a walk, shopping, or went to the Mall. How about open or read a book allowed Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology? Maybe it is to get best activity for you. You realize beside you can spend your time together with your favorite's book, you can wiser than before. Do you agree with it has the opinion or you have additional opinion?

Donna Canales:

As people who live in the particular modest era should be revise about what going on or data even knowledge to make these people keep up with the era that is always change and progress. Some of you maybe may update themselves by reading through books. It is a good choice for you personally but the problems coming to you actually is you don't know which one you should start with. This Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology is our recommendation to cause you to keep up with the world. Why, because book serves what you want and want in this era.

Robert Vargas:

Information is provisions for individuals to get better life, information currently can get by anyone with everywhere. The information can be a information or any news even a problem. What people must be consider if those information which is inside the former life are challenging be find than now could be taking seriously which one would work to believe or which one the particular resource are convinced. If you get the unstable resource then you have it as your main information it will have huge disadvantage for you. All of those possibilities will not happen with you if you take Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology as the daily resource information.

Terry McConnell:

Is it anyone who having spare time in that case spend it whole day by watching television programs or just resting on the bed? Do you need something new? This Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology can be the answer, oh how comes? A book you know. You are therefore out of date, spending your time by reading in this new era is common not a geek activity. So what these ebooks have than the others?
