Methods and Practice in Biodiversity Conservation (Topics in Biodiversity and Conservation)

Methods and Practice in Biodiversity Conservation (Topics in Biodiversity and Conservation)

This book brings together a selection of 22 original studies submitted to Biodiversity and Conservation that address aspects of methods and practice in biodiversity conservation. The contributions deal with a wide variety of approaches to site selection and management, especially the use of bioindicators, surrogates, and other approaches to site selection. As no complete inventory of all taxa in any one site has yet been achieved, alternative strategies are essential and bioindicators or surrogates come to the fore. The articles included cover a wide range of organisms used in such approaches to in situ conservation: annelids, anurans, arthropods, birds, bryophytes, butterflies, collembolans, flowering plants, a lobster, molluscs, rodents, and turtles. Further, the habitats considered here embrace estuaries, forests, freshwater, grasslands, the marine, mountains, and sand-dunes, and are drawn from a wide range of countries? notably Australia, Brazil, India, Italy, Mexico, Nigeria, Spain, Switzerland, Tanzania, and the U. K. Cryopreservation, well established for ex situ preservation of bacteria and fungi, is shown here also applied to bryophyte conservation. Finance is always a problem, and the final contribution examines the sources of money available for conservation action in an exemplar country, Mexico. Collectively, the studies presented here provide a snap-shot of the range of methods and practices in use in the conservation of biodiversity today. This makes the volume especially valuable for use in conservation biology and biodiversity management courses. Reprinted from Biodiversity and Conservation, Volume 18 No 5 (2009).

From reader reviews:

John Caldwell:

The e-book untitled Methods and Practice in Biodiversity Conservation (Topics in Biodiversity and Conservation) is the reserve that recommended to you to read. You can see the quality of the publication content that will be shown to an individual. The language that author use to explained their way of doing something is easily to understand. The copy writer was did a lot of study when write the book, so the information that they share for you is absolutely accurate. You also could get the e-book of Methods and Practice in Biodiversity Conservation (Topics in Biodiversity and Conservation) from the publisher to make you much more enjoy free time.

Sheldon McLean:

Many people spending their period by playing outside together with friends, fun activity using family or just watching TV all day every day. You can have new activity to pay your whole day by reading through a book. Ugh, you think reading a book can actually hard because you have to take the book everywhere? It fine you can have the e-book, having everywhere you want in your Cell phone. Like Methods and Practice in Biodiversity Conservation (Topics in Biodiversity and Conservation) which is having the e-book version. So , try out this book? Let's see.

Rodney Richardson:

Is it you actually who having spare time then spend it whole day simply by watching television programs or just lying down on the bed? Do you need something new? This Methods and Practice in Biodiversity Conservation (Topics in Biodiversity and Conservation) can be the respond to, oh how comes? A book you know. You are thus out of date, spending your extra time by reading in this fresh era is common not a nerd activity. So what these books have than the others?

Debra Becnel:

As a university student exactly feel bored for you to reading. If their teacher requested them to go to the library as well as to make summary for some publication, they are complained. Just small students that has reading's internal or real their pastime. They just do what the educator want, like asked to go to the library. They go to presently there but nothing reading seriously. Any students feel that studying is not important, boring in addition to can't see colorful photos on there. Yeah, it is to be complicated. Book is very important for you personally. As we know that on this period of time, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. Therefore this Methods and Practice in Biodiversity Conservation (Topics in Biodiversity and Conservation) can make you sense more interested to read.
