Science and Sensibility: Negotiating an Ecology of Place

Michael Vincent McGinnis

Science and Sensibility: Negotiating an Ecology of Place Michael Vincent McGinnis

If humans are to understand and discover ways of addressing complex social and ecological problems, we first need to find intimacy with our particular places and communities. Cultivating a relationship to place often includes a negotiating process that involves both science and sensibility. While science is one key part of an adaptive and resilient society, the cultivation of a renewed sense of place and community is essential as well.

Science and Sensibility argues for the need for ecology to engage with philosophical values and economic motivations in a political process of negotiation, with the goal of shaping humans' treatment of the natural world. Michael Vincent McGinnis aims to reframe ecology so it might have greater “trans-scientific” awareness of the roles and interactions among multiple stakeholders in socioecological systems, and he also maintains that deep ecological knowledge of specific places will be crucial to supporting a sustainable society. He uses numerous specific case studies from watershed, coastal, and marine habitats to illustrate how place-based ecological negotiation can occur, and how reframing our negotiation process can influence conservation, restoration, and environmental policy in effective ways.
